

# Child-resistant “easy-PIESY” Lidding

Big enough to dare,  
small enough to care.

Child-resistant blisterlidding in combination with special blister formats ensure that finished packs comply with legislation in various countries all over the world and aim to prevent children from accessing medicines.

Currently mainly paper/PET/aluminium laminates with opening systems such as peel&push, peel-off or tear to open are used for blisterpacks.

Compared to conventional paper/PET/aluminium laminates, easy-PIESY blisterlidding offers substantial advantages, such as

- reliable, consumer friendly opening
- cleanroom friendly → paper free
- better heat-transmission through laminate
  - reduced sealing temperatures → higher productivity
  - less stress for the medicine
- improved packaging process with existing tools
- same printability as for standard blisterfoils
- heatseal-lacquer is not changed
- easier to punch

**Improve patient safety and your packaging process with Constantia Flexibles’ “easy-PIESY” child-resistant blisterlidding.**
